

LAB 2 JAVA

1. Write a program to check leap year using if else. How to check whether a given year is a leap year or not.

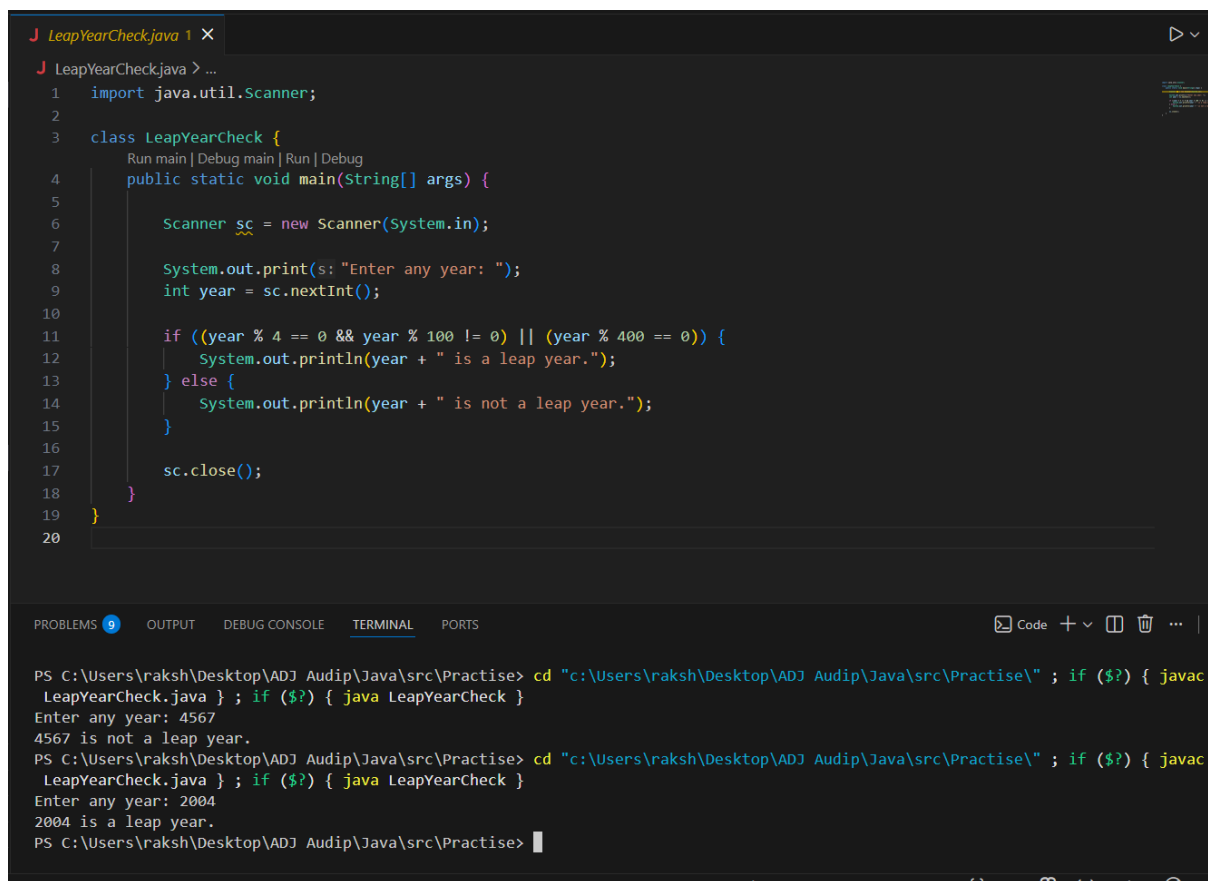

[Hint: Take an input of any number. Store it in some variable say year.

If a year is exactly divisible by 4 and not divisible by 100, then it is a leap year. Or if a year is exactly divisible by 400 then it is a leap year.]

Sample Input 1:

2004

Expected Output:

```
J LeapYearCheck.java 1 X
J LeapYearCheck.java > ...
1  import java.util.Scanner;
2
3  class LeapYearCheck {
    Run main | Debug main | Run | Debug
4      public static void main(String[] args) {
5
6          Scanner sc = new Scanner(System.in);
7
8          System.out.print(s: "Enter any year: ");
9          int year = sc.nextInt();
10
11         if ((year % 4 == 0 && year % 100 != 0) || (year % 400 == 0)) {
12             System.out.println(year + " is a leap year.");
13         } else {
14             System.out.println(year + " is not a leap year.");
15         }
16
17         sc.close();
18     }
19 }
20

PROBLEMS 9 OUTPUT DEBUG CONSOLE TERMINAL PORTS
PS C:\Users\raksh\Desktop\ADJ Audip\Java\src\Practise> cd "c:\Users\raksh\Desktop\ADJ Audip\Java\src\Practise\" ; if ($?) { javac LeapYearCheck.java } ; if ($?) { java LeapYearCheck }
Enter any year: 4567
4567 is not a leap year.
PS C:\Users\raksh\Desktop\ADJ Audip\Java\src\Practise> cd "c:\Users\raksh\Desktop\ADJ Audip\Java\src\Practise\" ; if ($?) { javac LeapYearCheck.java } ; if ($?) { java LeapYearCheck }
Enter any year: 2004
2004 is a leap year.
PS C:\Users\raksh\Desktop\ADJ Audip\Java\src\Practise>
```

2. Order of Parameters:

- `printDetails(String name, int age)`
- `printDetails(int age, String name)`

Demonstrate how to call each specific method from the main method by explicitly matching the parameter order.

```
J Printer.java x
J Printer.java > Language Support for Java(TM) by Red Hat > Printer
1  class Printer {
2      void printDetails(String name, int age) {
3          System.out.println(x: "Method 1 called");
4          System.out.println("Name: " + name);
5          System.out.println("Age: " + age);
6      }
7      void printDetails(int age, String name) {
8          System.out.println(x: "Method 2 called");
9          System.out.println("Age: " + age);
10         System.out.println("Name: " + name);
11     }
12
13     Run main | Debug main | Run | Debug
14     public static void main(String[] args) {
15
16         Printer p = new Printer();
17         p.printDetails(name: "Rahul", age: 22);
18
19         System.out.println(x: "-----");
20         p.printDetails(age: 25, name: "Amit");
21     }
22 }
```
