

LAB 4 JAVA

1. Create a Bank class and declare an instance variable named amount of type double. Create parameterized constructor to initialize variable "amount" with value 10000. Create two methods withdraw (double withdrawal Amount) and deposit (double deposit Amount). Calculate withdrawal based on some condition (using ternary operator) like if amount is sufficient then withdraw successful message will be printed on the console and amount should be updated after withdraw. Later on, deposit 5000 in the account balance at the end displays total balance on the console.

String message - (withdrawal Amount <= amount)? "Withdrawal successful": "Insufficient balance";

[Hint: Use constructor, ternary operator] Sample input: Amount= 10000 Withdrawal amount=5000 Deposit amount=5000

```
J Bank.java X
J Bank.java > Language Support for Java(TM) by Red Hat > Bank > main(String[])
1  class Bank {
2      double amount;
3      Bank(double amount) {
4          this.amount = amount;
5      }
6      void withdraw(double withdrawalAmount) {
7          String message = (withdrawalAmount <= amount)
8              ? "Withdrawal successful"
9              : "Insufficient balance";
10
11          System.out.println(message);
12
13          amount = (withdrawalAmount <= amount) ? (amount - withdrawalAmount) : amount;
14      }
15      void deposit(double depositAmount) {
16          amount += depositAmount;
17          System.out.println("Amount deposited: " + depositAmount);
18      }
19
20      void displayBalance() {
21          System.out.println("Total Balance = " + amount);
22      }
23
24      public static void main(String[] args) {
25          Bank b = new Bank(amount: 10000);
26
27          b.withdraw(withdrawalAmount: 5000);
28          b.deposit(depositAmount: 5000);
29
30          b.displayBalance();
31      }
32  }
33
```

Output:

```
